App. 1: Contexts with ram's head beads.

Pril. 1: Konteksti z jagodami v obliki ovnovih glavice.

RHB = Ram's head beads / jagode v obliki ovnove glavice; DM = Dolenjski muzej; MM = Muzej Mengeš; NHMW = Naturhistorisches Museum Wien;

NMS = Narodni muzej Slovenije; PM = Peabody Museum of Archaeology and Ethnology; RZGM = Römisch-Germanisches Zentralmuseum; TM = Tolminski muzej

\* This grave also contains seven bone beads that have been interpreted as zoomorphic (see Peabody Online Catalogue 40-77-40/11977); however, the most well-preserved beads have knobs where a nose would be on a ram's head bead. While aspects of these beads are similar to ram's head beads, it is unclear that these beads actually zoomorphic and so they have been excluded from this analysis. The same is true for nine amber beads from Magdalenska gora housed at the Naturhistorisches Museum Wien that are without provenience. While many aspects of the shape are similar to ram's head beads, there is a distinct knob on the tip of each bead which is distinct from the noses of ram's head beads (see Tecco Hvala, Dular, Kocuvan 2004, 282 Fig. 105).

\* V tem grobu je tudi 7 koščenin jagod, ki so bile interpretirane kot zoomorfne (glej Peabody Online Catalogue 40-77-40/11977); vendar imajo najbolj ohranjene med njimi izrastke, kjer je na jagodah v obliki ovnove glavice nos. Čeprav so slednjim na videz podobne, ni povsem jasno, ali gre za zoomorfno upodobitev, zato niso vključene v to analizo. Enako velja za 9 jantarnih jagod z Magdalenske gore, ki jih hrani Naturhistorisches Museum Wien in so brez znanih najdiščnih podatkov. Tudi te so podobne jagodam v obliki ovnove glavice, vendar se od njih razlikujejo po izrastku na konicah, kjer naj bi bile nosnice (glej Tecco Hvala, Dular, Kocuvan 2004, 282, sl. 105).
